Story Points:	8

Description

As an API User
I want to access my own API audit logs by default without requiring API Audit Log Service authorization maintenance in BCO BM
So that I can review my API activity without additional service entitlement setup.
Feature: Default API Audit Log Access for API Users

AC1: API Audit Log Service is removed from BCO BM authorization maintenance

Given the administrator accesses the HTH API Authorization List in BCO BM
When the administrator views the available API services
Then the API Audit Log Service shall not be displayed
And no maintenance action shall be available for API Audit Log Service
Screen

AC2: API User automatically receives audit log inquiry access

Given a company has Corporate Host-to-Host API Service enabled
And an API User is created under the company
When the API User accesses the API Audit Log Inquiry function
Then the system shall allow the API User to access the function without additional service authorization

AC3: API User views own audit logs
Given the API User has successfully accessed the API Audit Log Inquiry function
When the API User submits an audit log inquiry request
Then the system shall return only audit log records generated by the same API User

AC4: API User attempts to access another user's audit logs
Given audit log records exist for multiple API Users under the same company
When an API User submits an inquiry for another valid API User's audit logs
Then the system shall reject the request
And only the API User's own audit log records shall be accessible

AC5: Existing companies continue to support audit log inquiry after migration
Given a company is already onboarded with Corporate Host-to-Host API Service
When the API Audit Log Service is removed from the authorization list
Then all existing API Users shall continue to have access to their own audit logs
And no manual entitlement migration shall be required

Comments

Comment by PAN, Annie Li Hua [26/Oct/26]

Confirmed with HO, Holly Shu Ki & WONG, Alick Tai Chi : "Audit Log" is enabled by default for all API Profiles
